The Nissan Livina is a compact MPV produced by the Japanese automaker, with its first generation introduced in China in July 2006 and later released globally. The initial model came in two body lengths, accommodating either two-row or three-row seating. It was manufactured in several countries, including Brazil, Malaysia, Indonesia, Philippines, Vietnam, South Africa, China, and Taiwan. The second-generation Livina debuted in February 2019, featuring a three-row-only design based on the Mitsubishi Xpander. As of 2022, this model is only available in Indonesia and the Philippines. The Nissan Livina measures: * Length: between 4,180 mm (Livina L10) to 4,540 mm (Grand Livina X-Gear L11) * Width: 1,690 mm (L10), 1,700 mm (Livina/Grand Livina L11), and 1,735 mm (Livina/Grand Livina X-Gear L11) * Height: between 1,590 mm (Livina/Grand Livina L10/L11) to 1,650 mm (Grand Livina X-Gear L11) The curb weight is approximately 1,117 kg (2,463 lb). The Livina has a successor called the Nissan Kicks. There are different trim levels and body styles: * Two-row models: Livina or Livina XR (Taiwan), Livina Urban or Livina Sport (Taiwan) * Three-row models: Livina Geniss (China) or Grand Livina (elsewhere) The model was first introduced in China in November 2006 as the three-row Livina Geniss, followed by the two-row Livina in April 2007. The two-row Livina was also produced in Taiwan and South Africa. Power comes from various four-cylinder engines: 1.5-litre, 1.6-litre, or 1.8-litre. Transmission options include a 5-speed manual, 4-speed automatic, 6-speed manual (for the 1.8-litre engine), or another 4-speed automatic. In various markets, different engine variants were offered for the Grand Livina. The Philippines and Brazil only got the 1.8-litre engine, whereas South Africa received the 1.6-litre variant. In Malaysia, the Grand Livina was launched with two engine options: HR16DE (manual and automatic) and MR18DE (automatic only). A "Tuned by Impul" edition was introduced in January 2009. Later updates included changes to the front grille, dashboard color, and instrument faces. The "Tuned by Impul" version was also updated. The Livina Geniss, Grand Livina, and other variants were launched in different years for various markets. These include China, Malaysia, Indonesia, South Africa, and Brazil. Each launch brought changes to the engine options, interior, and exterior design. A crossover-styled variant, known as the Livina C-Gear in China or X-Gear elsewhere, was introduced. This variant featured unpainted body claddings, side body garnish, rugged-style bumpers, and roof rails. It was powered by a 1.6-litre engine in most markets but a 1.5-litre engine in Indonesia. Further updates to the models included new front grilles, wheel designs, and interior color changes. The facelifted Grand Livina Highway Star was launched, followed by the XV and Ultimate variants receiving sporty Autech front bumpers. The new Highway Star model features exclusive body kits and sporty alloy wheels. Meanwhile, the L10-series Livina continued to be offered in Brazil and South Africa after the introduction of the L11-series Livina models in China and Southeast Asian countries. Spy shots of the L11-series Livina were released online on October 8, 2012. The L11-series Livina was first introduced at the Shanghai International Automobile Industry Exhibition in April 2013, with a redesigned front and rear fascias. In Indonesia, the L11-series Grand Livina and Grand Livina X-Gear were launched on May 29, 2013. These models have revised front ends, front fenders, and rear panels with distinctive taillights and trunk garnishes. The Grand Livina X-Gear comes with unique features such as different front bumpers, black over fenders, black body cladding, and roof rails. The CVT option replaced the 4-speed automatic transmission in this model. For the Indonesian market, the Grand Livina is available in SV, XV, and Highway Star grade levels. The L11-series Grand Livina for Malaysia has a 1.6-litre engine and 1.8-litre engine. However, the 1.6-litre manual Grand Livina has since been discontinued in Malaysia. The two-row Livina C-Gear was introduced in China and later became available as the X-Gear in other markets. The second-generation Livina was launched in Indonesia on February 19, 2019, following the discontinuation of the L11 Grand Livina. As a rebadged and restyled variant of the Mitsubishi Xpander, it is manufactured alongside the Xpander by Mitsubishi Motors in Cikarang, West Java. The name "Livina" was chosen due to its established usage in Indonesia. Unlike previous generations, this model features crossover SUV-like proportions and is only offered in one body variant. Nissan has redesigned several exterior panels, including the V-Motion grille, headlights, front bumper, and rear bumper. The second-generation Livina comes in four grade levels: E, EL, VE, and VL. In 2020, a Sporty Package was introduced for the VE grade, while the E grade was discontinued in 2021. The model was also launched in the Philippines on September 6, 2022, in left-hand drive form and is imported from Indonesia. Nissan has made significant announcements and updates about its Livina MPV model over the years. As early as October 22, 2007, the Nissan Livina Series was introduced in Taiwan with plans to roll out in South Africa soon after. In Malaysia, the Grand Livina was unveiled on December 19, 2007, followed by a facelifted version in June 2011. In September 2022, Nissan Philippines announced the launch of its all-new Livina MPV model. The company has also expanded its local production capabilities to Vietnam, as reported in an official statement dated June 29, 2009. Furthermore, plans are underway to increase production at Nissan South Africa, according to a news article published on August 22, 2012. The design of the Livina series was registered with IP Australia | Australian Design Search under registration number 307511 and design number 200515248. The car has undergone several facelifts over the years, including one in February 2011 that added more safety features.
